Principle of Working	SUPER-SYS The No.1, Centrifugal Planetary Finishing Machine, Model SS-40. The machine having total volumetric capacity of 40 litres divided equally in 4 barrels of 10 litres each. The barrels are of FIXED type to maximise the productivity. The machine is designed to generate high compressive force between media and parts. The reverse rotation of the barrels result in rubbing of the media against parts under pressure, causing burr removal & surface refinement in a very short process cycle. The inclined axis barrel rotation generates unique SUPER-EIGHT motion, which causes additional rubbing and polishing effect. The machine is complete with all motion generation drive and mechanism. It is powered by 3 HP motor. Positioning of turret and a barrel during loading is done by Inching System. Provision for holding the turret and barrel firmly in position is provided. Machine is complete with all electricals and control panel for smooth, efficient and safe running.
